

Anna Bellizzi

Senior Technical Support Specialist

Hiring Team at 6sense,

Sometimes the only context to a stated problem is that “it’s not working.” I see that both in customer tickets and in issues escalated directly by senior leadership. In both cases, that ambiguity is a meaningful signal, not a lack of information. My approach is consistent: slow the situation down, ask the right questions, and create clarity before jumping to a fix.

I’ve spent much of my career working on data-driven platforms where false alarms, misleading dashboards, or inconsistent outputs have real consequences. When users stop trusting what they see, they stop acting on it. That is not a user problem. It is a system interpretation problem.

Often the data exists and the system may even be behaving as designed, yet what the customer sees does not match reality and trust in the platform begins to erode. In those moments, my role is to validate what the system is actually doing beneath the surface, separate symptoms from root cause, and make the truth of the system clear.

In practice, this has meant serving as a senior escalation resource, diagnosing issues through data validation and system analysis, working closely with engineering to resolve underlying causes, and documenting what we learn so the same problems are solved once rather than repeatedly. My work directly supports revenue recovery, account stabilization, and long-term system reliability by owning complex issues end to end.

If you’re looking for someone who can take ambiguous problem statements, turn them into clear technical truths, and carry them through to resolution, I’d be glad to talk.

Sincerely,

Anna Bellizzi
